Video Surveillance Systems - CCTV

Video Surveillance Systems can be a deterrent and detective security control for critical infrastructures, buildings, and public places

The **Allied Information Technology Services** has an expert engineers' team who worked in airports and other essential government locations for the Installation, configuration, and commissioning of Video Surveillance systems.

Our team is not only an expert in Normal Video Surveillance cameras but worked on Face recognition cameras, Thermal Cameras installation, and License plate recognition cameras.

Active and Passive Network Equipment's

We provide both Active and Passive network solutions at **Allied Information Technology Services**. Due to its appropriate competencies, we could receive high-level authorization from the world's leading manufacturers, such as ZTE, Cisco Systems, Allied Telesis, Eugenius, Net gear, Norden, Belden, Schneider AT&T, and other companies.

The main lines of our activities are:

Delivery of equipment for Structured Cabling System

Delivery of connectivity equipment.

Designing and delivery of control and monitoring sys

for data centers

Access Control & Alarm Monitoring Systems

Controlling access to any premises is a well-designed security system's essential requirement. In addition, the Access Control System provides valuable information about the personnel accessed in / out.

Our Access Control Systems is an excellent security system for small applications such as an office or big applications such as an Airport Terminal or a University Campus that requires a more significant number of entry control points. Our most advanced access control solutions can also integrate with Time and Attendance Systems and support your payroll.

Audio / Video Intercom System

Our team of professional's leaves nothing to chance regarding the installation and commissioning of any Intercom solutions.

Allied Information Technology Services has the most suitable system for small to large-sized buildings and residential areas with floor distribution. Villas, offices, buildings, and towers will have the right solution from us.

We offer the complete system with the highest management capacity and incorporate most additional features. It can be for independent blocks and residential areas connected with other systems. Our engineers study the latest codes and industry trends and work with manufacturers who meet our stringent demands. At **Allied Information Technology Services**, we offer only the best, and the emphasis is on providing a high-quality system that significantly ensures maximum savings for our customers.

Magnetic Door Lock System

An Electromagnetic lock, magnetic lock, is a locking device that consists of an electromagnet and an armature plate. There are two types of electric locking devices ie, "fail-safe" and "fail-secure". Fail-secure locking devices remain locked when power is lost. Fai-safe locking devices are unlocked when de- energized. The products we deal with have been certified by the CE of the European Union.

Allied Information Technology Services provides you with our best quality products, most advanced technology, and most competitive prices.

Gate Barrier

We have a wide variety of gate barrier models if you are looking for the best gate barrier to be installed in your facility.

As a solution provider, we can provide a total solution with Gate Barrier connected with Long Range RFID (UHF Tags), Short Range RFID Cards, ANPR Readers, etc.

Allied Information Technology Services has a capability for different arm lengths and features based on the site requirement such as

- Retractable Arm
- Safety Induction Loop
- Safety Photocells
- Folding Arm
- Barriers of different opening speed (1.2 Sec to 6 Sec)
- Barriers with different Arm lengths.

In a nutshell, from a standalone barrier to barrier for integrated parking management system are on our portfolios.
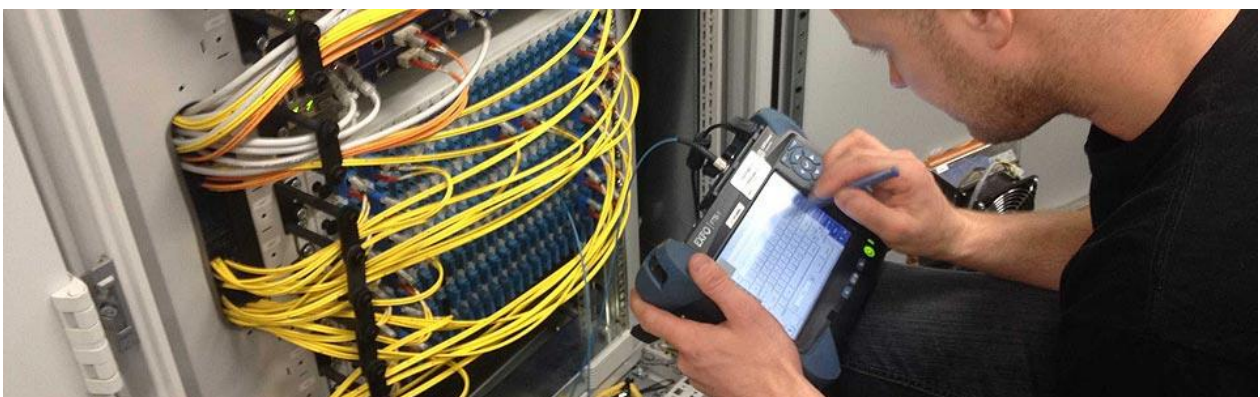

Structural Cabling for Fiber and Data.

Allied Information Technology Services has an excellent knowledge of Fiber & Data structural cabling, and it's the lifeline of your IT network, transmitting the voice, data, and video signals you depend on daily for your critical business activities. Your cabling system may be your network investment's first and smallest part. Still, as the network component with the most extended life cycle, it can deliver significant long-lasting advantages.

OTDR Splicing and Testing Cables

An Optical Time Domain Reflectometer (OTDR) is a device that **tests the integrity of a fiber cable and is used for the building, certifying, maintaining, and troubleshooting fiber optic systems**. The Allied Information Technology Services team has experience and expert knowledge for fiber splicing and testing
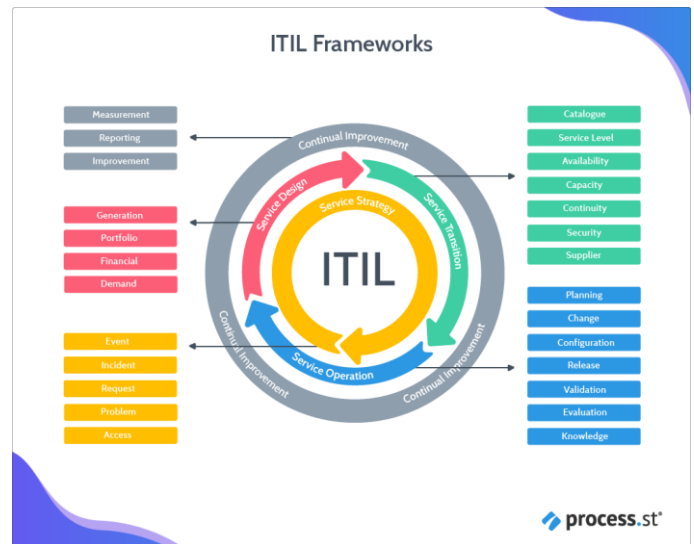

EAS Antitheft System

An anti-theft system is any device or method used to prevent or deter the unauthorized appropriation of items considered valuable. Theft is one of the most common and oldest criminal behaviors. Where the ownership of a physical possession can be altered without the rightful owner's consent, theft prevention has been introduced to assert the ownership whenever the rightful owner is physically absent. Anti-theft systems have been around since individuals began stealing other people's property and have evolved accordingly to thwart increasingly complex
methods of theft

Allied Information Technology Services provides the best solutions for EAS antitheft **systems with RFID.**

ICT- Information and Communication Technology Services.

Allied Information Technology Allied Information Technology Services offers Technologies used to handle communications processes such as telecommunications, broadcast media, intelligent building management systems, audiovisual processing and transmission systems, and network-based control and monitoring functions with ICT Components with ITIL Framework.
